EDUCATION

University of Texas at Dallas

Aug 2024 – May 2028

Bachelor of Science in Computer Science

Richardson, TX

Relevant Courses: Data Structures & Algorithms, Computer Architecture, Discrete Mathematics, Systems Programming

TECHNICAL SKILLS

Languages: Python, Java, C++, C, SQL, JavaScript

Backend & Cloud: Node.js, Express, Flask, AWS (Lambda, SQS, SNS, CloudWatch), GCP, Kubernetes

Tools & APIs: Redis, Git, GitHub Actions

EXPERIENCE

Systems Engineering Intern | Toyota — Navigation, VUI, & AI

May 2026 – August 2026

- Built a Python service polling the **Jira API** on a scheduled interval to aggregate ticket status across **200+ tickets** spanning multiple teams, replacing a manual weekly report process and cutting reporting turnaround from hours to minutes.
- Built a Python service integrating the **Google Maps API** to prototype route-based POI visualization, using a live stakeholder demo to validate the approach and scope development around the highest-impact use case.
- Designed retry/backoff semantics** for an AI product's rate-limiting and conflict resolution, covering timeout and low-connectivity edge cases; adopted directly into the engineering team's implementation.
- Identified legal liability risks** in an AI feature's outputs and designed constraint guardrails adopted by engineering and legal stakeholders.

Software Engineering Intern | Gather

June 2025 – Aug 2025

- Implemented and debugged **GCP authentication workflows** as part of an agile sprint team, reducing login/session failures by 20% (measured via error-rate dashboards) for an app with 10,000+ active users.
- Built real-time data sync services in **Firebase**, reducing sync latency from ~800ms to ~200ms and handling conflict resolution for concurrent writes across active sessions.
- Integrated the **Stripe API** for end-to-end payment processing, supporting \$20,000+ in tracked revenue across ~2,000 monthly transactions with automated ticketing and zero reported transaction failures.

PROJECTS

DropWatch — Real-Time Crypto Price-Alert System

July 2026 – Aug 2026

- Built a real-time price-alert system monitoring **118+ liquid Kraken USD markets** with custom price and volatility rules.
- Reduced rule-evaluation latency **226x (40.6ms → 0.18ms per-pair)** at 120 pairs / 48,000 rules using an asset-bucketed, threshold-sorted in-memory index rebuilt from Postgres and invalidated via Redis pub/sub.
- Delivered exactly-once notifications through an **SQS/SNS pipeline** with a transactional outbox, identifying and fixing Redis invalidation and SQS duplicate-enqueue concurrency bugs during code review.

DevCommandHub — VS Code DevOps Extension

Aug 2025 – Sept 2025

- Built a VS Code extension that translates natural-language commands into **GitHub Actions** and **Kubernetes** deployment operations through a **Node/Express backend** and job execution layer.
- Built an intent-parsing layer using zero-shot classification with confidence thresholds and regex fallback, **achieving 83% accuracy** while preventing low-confidence commands from silently executing incorrect actions.
- Designed **Supabase** relational schemas and an explicit job state machine (queued → running → completed/failed/cancelled), decoupling long-running jobs from the IDE and enabling concurrent per-user tracking and crash recovery.

PlanWhich — Intelligent Project Management Platform

Sept 2025 – Dec 2025

- Built an event-driven project management platform with an **AWS Lambda backend** handling project creation, file uploads, and task updates.
- Modeled project, file, and task metadata in **DynamoDB** around shared access patterns, enabling project overviews, file retrieval, and task status queries through a unified query model while **maintaining ~30 ms average query latency and sub-400ms cold-start latency** (measured in CloudWatch).
- Built an asynchronous **OpenAI** pipeline that auto-tagged uploaded files and extracted meeting action items into trackable tasks, reducing manual task setup by **approximately 50%**.

ORGANIZATIONS

Member, Kappa Theta Pi (KTP)

Jan 2025 – Present

- Mentored incoming pledges on technical skills and career development as Membership Committee member.
